

Chicago Market Disposal Facilities

Phase 2: Working face of live landfill, Pontiac

Planning for the Future

Allied Waste Services operates a network of seven landfills that serve the waste needs of the Chicagoland area, **providing more disposal capacity than any other waste company in the market.**

Uninterrupted Service

With more than 150 million cubic yards of airspace available or being developed, our significant available landfill capacity means **more years of uninterrupted service** to our customers.

Single-Supplier Service

With our network of hauling companies, transfer stations and landfills, we are the **largest and most prepared company in the Chicago market** providing single-supplier service to our customers, managing their waste from the time it is collected until long after it is disposed. This limits any potential problems that may arise from third-party involvement in the process.

Local Commitment

Our facilities are committed to supporting the communities they represent, and **each facility provides significant financial support** to local environmental and governmental programs.

Environmentally Safe

Each of our landfills is **constructed and operated to exceed applicable state and federal rules** for disposal facilities.

Operational Excellence

In addition to regular and frequent inspections performed by state and local agencies, our facilities routinely are audited by many of our customers. **Customer-driven audits provide the peace of mind they deserve and may help reduce their insurance costs.** Our facilities are ready and available to any customer who wishes to inspect or audit our operations.

Online Resources

Answers to questions or forms and information relating to disposal requirements at our facilities may be obtained conveniently online at our website, or by calling one of our facilities.

Phase 1: Landfill preparation

Phase 3: Capping of landfill

Phase 4: Environmentally friendly outcome
